

Protect What's Important.

Remote Racking Protects:

Your Personnel

Your Equipment

Your Investment

Remote Racking is the most effective and immediate way to eliminate the risk of Arc Flash for your employees, by allowing them to perform operations from outside of the Arc Flash Boundary. But shouldn't you also protect your valuable equipment as well?

The cutting-edge technology and life-saving capabilities of the **inoRAC[®]** Universal Remote Racking device are now available in a stand-alone, single application device.

The **isoRAC[®]** Single Application Remote Racking device can protect your employees and your equipment, as well as become a lasting component of your Safety Program - protecting your investment for years to come.

isoRAC®

Single Application Racking Solutions

This user-friendly, light-weight device is easy to install, operate and remove and requires no switchgear modifications. The unit monitors torque and breaker position during the racking process and, unlike competing products, limits applied torque to protect switchgear from damage (see comparison charts).

The high-definition color touchscreen panel displays easy, step-by-step directions and racking data for the user during the entire process.

**Set up Your FREE Demonstration
Online or In Person!**
